With Sopheon's Accolade Cloud, you can:

• Get your organization up and running with our applications quickly, securely, and cost-effectively.

• Enjoy the flexibility of deploying the Accolade solution elements you need now with the option to expand later.

• Minimize the burden on your IT resources.

• Switch to an on-premises deployment at any point in the future.

Your business needs an innovation solution now and:

• You can’t wait for IT resources, constraints and schedules.

• You want to get started immediately.

• You don’t have time or resources to install and deploy software internally.

• You want deployment flexibility now and later.

No problem. Sopheon provides multiple deployment and solution access options to meet your specific business needs and circumstances. Your choice – now and later.

Deployment and Access with Flexibility, Reliability and Security

Sopheon’s Accolade Cloud provides flexible deployment and access to whatever elements you need in the full Accolade solution suite for innovation in the cloud without compromise. Accolade Cloud is more than just faster deployment. It provides you with flexibility for deployment of and access to what you need now, supports your growth plans, and since it’s the same software as the on-premises solution, it allows you to switch deployment choices in future.

With Accolade Cloud, you get the complete Accolade solution in a secure, reliable and scalable deployment with all the configurability and accessibility options for high-performance innovation in the cloud.

Sopheon’s Accolade Cloud solution includes everything you need to implement, execute and maintain your Accolade server, including:

• Hardware
• Server and database licensing
• Software installation
• Maintenance and monitoring
• Upgrades

• Backup
• Security
• Reliability
• Availability

When you use Sopheon’s Accolade Cloud software licensing and maintenance solution agreement, you get:

• A website address to a production instance of Accolade installed with the user licenses for the products and modules purchased.
• Temporary test systems as needed by Sopheon Client Services to support the implementation and ongoing expansion of Accolade.
• Temporary test systems as needed for Customer Upgrade Testing and Acceptance before moving to new versions of the Accolade software.
• Upgrades and patches to Accolade systems as required.
• Option of purchasing an additional dedicated sandbox instance of Accolade, with a monthly refresh of the production data.

Sopheon’s IT experts will team with technical and administrative contacts inside your organization to agree on optimal maintenance schedules and to establish protocols for dealing with unexpected events. Through the rigors of this preparation, potential problems can be identified and eliminated before they become interruptions to your business.

Our Microsoft® Gold-certified staff can help you get up and running with the Accolade Cloud solution quickly and affordably, while minimizing the burden on your IT organization.

Sopheon uses a robust enterprise-class platform designed to keep your system fully operational and your critical data protected and available 24 hours a day, 7 days a week. Our support and maintenance processes ensure service quality, reliability, and performance, including rigorous system and data backup procedures.

Sopheon’s Accolade Cloud solution provides a secure, highly reliable and cost-effective method to get your organization up and running with our applications in a short amount of time.

• Sopheon operates within several data centers to provide global coverage, with operational facilities in Denver, Colorado, USA within minutes of Sopheon’s primary product development and support office; Eindhoven, Netherlands within minutes of Sopheon’s secondary product development and support office; and Brisbane, Australia, within minutes of Sopheon’s viaReseller Partner, Prodex. Each location is an enterprise-class facility with the top geographical region certifications.
• Accolade Cloud is based on a colocation model whereby Sopheon completely controls access to and monitoring of the infrastructure and data. This includes the virtualization layer, Microsoft Windows® Servers, database servers, firewall, antivirus, maintenance windows, encryption keys for servers and backups, and replacement capability. This maintenance of the Cloud Infrastructure is performed either onsite or via a secure, back-side connection.
• All data is encrypted -- during usage by HTTPS and SSL, at rest in the Sopheon Cloud, and also in the offsite backups.

• We recognize that our standard offering may not be a fit for everyone. We therefore offer flexible deployment options, for example:
  - Sopheon Cloud Authentication is provided as part of the Cloud Infrastructure. Utilizing customer authentication can be implemented on a custom basis.
  - Accolade Cloud is accessible over the internet as a public site utilizing HTTPS and SSL. Additional restrictions to accessing the site from only specific locations—such as your company network—can be implemented on a custom basis.
  - Accolade Cloud supports not only the standard Accolade solution, but also solutions that have been extended. Additional fees may apply to support these extensions.
